

## A thank you note...

Dear Dr. Burt and team,

November 6th, 2019

Over 12 yrs my disease was progressing relentlessly. Approved therapies failed one after the other, with devastating impact on emotional, professional, financial health. I knew I was heading towards a wheelchair and getting ready to give up.

Three years ago, I found a one-time, experimental treatment under your care. Day 0 of the treatment - when my dead immune system was infused with my own stem cells, I along with your transplant team hoped it would stop my downward spiral.

Well, today the results are stunning! Three drug free years, no new disease activity on MRIs, every clinical test and end points show significant improvements. While the quantitative results are very impressive, for me the QOL improvements have had the most positive impact. I have finally regained confidence in my abilities to function in this world as a worthwhile human being. I feel that I have been given a rare gift - a second chance at life.

Dr. Burt, I speak for every one of your patients - thank you and your team for giving us that rare gift.

An eternally grateful patient

Until recently, I was an Atheist. And now...

my religion is stem cell therapy

my faith is medicine

my God is you
