

Dr. Burt,

Three years ago, I came to you as a 19-year-old patient quickly progressing towards a wheelchair. You saw an urgent need for help, and three months later I was with your team in Chicago beginning my transplant. My life is completely changed. I am in remission and have little if any disability, and most importantly I see a future for myself again. Not only did this transplant save my life, but it also led me to my future husband. HSCT wasn't his miracle, but we are both waiting eagerly to see what you do next! I know your good work doesn't stop here. Thank you, thank you, thank you.
