

Dr Burt

My wife (before the transplant) was having full body spasms that restricted her ability to breath. As a result, she had a complete respiratory failure that required intubation and ICU care for several weeks. Prior to the stem cell transplant, her entire body was continuously firm; her muscles never relaxed. Immediately following the transplant, her muscles relaxed and she had much more flexibility. The stem cell transplant literally saved her life and provided a new quality of life.

Words cannot express our gratitude for the stem cell transplant and the professionalism of Dr. Burt and his team. Prior to the transplant, my wife and I went to bed every night considering that she may not live to see another day. Our lives have been restored.

Best Regards,
Glenn
