

2-14-19

Dear Dr. Burt,

367 days ago you transplanted our son, Zac, for MS. As part of my personal observation of that anniversary I found myself watching a YouTube video of your 11/2018 presentation at the Roche-sponsored AT THE LIMITS conference in London. FANTASTIC! Of course, by now I've pored over the JAMA article several times, but the power of what you're doing never fails to leave me with a tremendous sense of gratitude. You can't be thanked enough. Zac wants his life to have real purpose & is studying Environmental Geoscience. What good he achieves / accomplishes will be in no small part thanks to you & your team.

He is looking forward to his follow-up with you in MAY. Until then, let me leave you with this. In January his local neurologist

told

him she would see him in a year or so. No drugs, no problems. Just a 20 year old with his life back. Thank you.

- Shannon
