Dr. Richard Burt

Dear Dr. Burt,

I write today, on behalf of our student group from Wheaton College, to offer our deepest thanks and appreciation for your visit with us yesterday. As I mentioned during our visit, the students on this field trip have all expressed an interest in medical or research fields, and you gave them a tremendous sense of purpose and inspiration for their vocational interests. I am particularly thankful that you challenged them to discover a passion and to follow it, and that you shared your own story as an example of that.

The students were absolutely thrilled by the tour that you provided. For young college students to actually see stem cells with their own eyes gives them a much deeper understanding of the whole field.

Enclosed please find a gift copy of my recently published book on Theology and Biotechnology. I am appreciative of the discussion we had earlier this year as I was writing the chapter on stem cell research.

Again, thank you for taking the time to meet with us. Our best wishes are with you as you continue to work toward the stem cell revolution that will bring new hope and new cures to many who are suffering.

Sincerely,

Paul J. Kirbas  
Pastor, First Presbyterian Church of Wheaton, IL  
and Adjunct Professor of Theology and Culture, Wheaton College
