

Thank You

So
much

Dr Burt,

There are really no words to express the thankfulness we feel for your taking a chance and treating [redacted]. We truly believe ASCT was her only chance of having a life-time will tell as she continues to recover.

I am reading your new book "kill switch" and am learning so much about viruses and their effect on history. I hope you find the enclosed cool thought. Proving or how bacteria are doing the same and leading to autoimmunity. We know that [redacted] Multiple Sclerosis diagnosis

was preceded by tick borne infections she contracted in New England [redacted] we now believe these untreated/misdiagnosed infections led to the neurological autoimmunity that has derailed her life.

Someone as special as you

certainly knows how

to make the world a better place.

We are forever grateful to you for giving us a hope of a future. And we wish you a long life of doing this work that is both noble and ground breaking. Forever Grateful.
